

DAM OLD PEOPLE

INTER Yes. We're here today with Mr. Tungsten Green, CEO of BS Enterprises and Overseers of the Chilliwack River Hydro Electric Project. Perhaps you can tell us a little bit about the project, Mr. Green?

CEO Certainly Ben. The Chilliwack River Hydro Electric Project is a joint venture between Federal, Provincial and local governments and BS Enterprises to spend lots and lots of money. An environment of cooperation and focus exists between all the parties and we are confident we can meet or exceed all spending limits.

INTER And what exactly is the project?

CEO I'm sorry?

INTER What is it that all this money is being spent on?

CEO Oh, I see. That never really came up. That's a very good question though.

INTER Today we also have with us Wedgewood Green, head engineer of the project, who claims he is in no way related to his uncle.

ENGINE Hi Uncle Tungsten.

INTER Now, Mr. Green...

CEO & ENGINE Yes?

INTER Mr. Wedgewood Green. You say you are going to construct a dam out of completely renewable resources.

ENGINE That's right, Bob. We will be the first environmentally friendly dam ever constructed.

INTER And what will the dam be made out of?

ENGINE Old people.
